Offered by:  
Coast Music Therapy  coastmusictherapy

Does your child have a good ear for music or a special interest in the piano?

Keyboard lessons not only boost your child's musical abilities, but also help develop fine motor skills, eye-hand coordination, attention, and sequencing skills.

According to RESEARCH, children involved in ongoing music instruction show higher IQ's and increased academic performance, especially in the area of mathematics.

HIGHLY QUALIFIED instructors combine their expertise in music education, special needs, and behavior intervention to cultivate your child's musical talents.

Our unique PIANIMATION curriculum is designed for the visual learner and provides an effective approach to note reading, rhythm skills, music theory, and performance. We also incorporate music TECHNOLOGY to prepare your child for today's high tech world.

As part of our program, your child's accomplishments are showcased at our annual MUSIC RECITAL, where each student has the chance to perform for family and friends! We also teach voice, guitar, and basic percussion.
